

EasyCard for DriveRight

Retrofit & Overhaul information and procedure

This form contains all the important information needed for the EasyCard Retrofit & Overhaul procedure. Please read all the instructions carefully and please fill in the information required.

EasyCard retrofit details

The EasyCard is a retrofit smart card reader which will be connected to the DriveRight. With an EasyCard in the vehicle, drivers can identify themselves using the EasyCard Smart Card (please note a Smart Card must be used if the immobilizer option is fitted). The driver ID is then automatically entered into the DriveRight, so the driver does not have to enter a code manually any longer (and no mistakes can be made). In addition, if required, only authorized drivers can use that specific vehicle because an immobilizer facility is part of the product.

The EasyCard Manager (card programming device and software) gives the fleet manager the ability to set up a full system of driver authorization. He can give a driver authorization for only one vehicle, for a group of vehicles or for all vehicles. Included is the EasyCard Supervisor Card, which can be used by the fleet manager and the installer of the DriveRight to release the immobilizer and all keys on the DriveRight monitor. There are two versions of the EasyCard Manager available, one using USB and another using the serial port.

As the EasyCard is a retrofit product, all currently used DriveRight Trip 500AL's and DriveRight 600's can be equipped with this accessory. DriveRights need to be sent to the EasyCard Workshop in The Netherlands. Because of this, a unique bonus is offered: a complete overhaul of the DriveRight is included in the price. When a DriveRight has been used for a few years, some parts may need to be replaced (like the connector cable, the window cover and some other parts - battery not included). So you send in the "old" DriveRights and you get back almost new ones including the EasyCard, ready to use for many years again! No refund in case an overhaul is not necessary.

Overhaul details

The overhaul includes replacement of all parts which need replacement, like the connector cable, lamps, LCD, window cover, keypad and so on. Parts which don't need to be replaced, won't be replaced of course. In most cases also the lower case, battery cover and Velcro will be replaced, and the upper case where necessary. The battery and the components on the board will also be checked. The memory will be cleared, but the settings (like the calibration and the DriveRight ID) will remain in the DriveRight (unless factory settings are required).

Not included in the overhaul is the battery. Where a battery needs to be replaced, it will be charged for. Defective DriveRights and replacement of the board is not part of the overhaul. These will be charged for separately.

Prices

Contact your DriveRight supplier for prices for the EasyCard products:

9520	EasyCard 500 Retrofit & Overhaul
9521	EasyCard 600 Retrofit & Overhaul
9530	EasyCard Smart Card

8156GEC	DriveRight 600 GD EasyCard
8156HEC	DriveRight 600 HD EasyCard
8156VEC	DriveRight 600 VSS EasyCard

Additional information about the EasyCard

Once the EasyCard is installed in the vehicle, Smart Cards must be used for the driver to be identified correctly. If the immobilizer is fitted, a Smart Card MUST be used or the vehicle will not start. If the immobilizer is not fitted the driver ID will revert to the default setting (as setup by the DriveRight software). Every driver should have at least one Smart Card - and the driver ID on the card must be identical to the driver ID set in the DriveRight software database of drivers.

Note that if the immobilizer option is fitted, the vehicle cannot be started without a valid Smart Card inserted, so it would be advisable to have two cards per driver in case one gets lost. On the Smart Card there is space to write the name of the driver, etc. (visit www.driveright.cc for a picture of the smart card). Any Smart Card can be programmed (by the EasyCard Manager) as a driver ID card (or one of the other type of cards required). The quantity of Smart Cards needed can be filled in on the Order Form.

Downloading data from the DriveRight is done just the same as a standard DriveRight (take the DriveRight and the EasyCard from the vehicle, connect it to the PC and download the data). Alternatively the LogBox can be used as a shuttle device for the DriveRight data (visit www.driveright.cc for further details about the LogBox).

Shipping details

DriveRights need to be shipped to the EasyCard Workshop in the Netherlands. Before DriveRights are shipped, note the following.

It is advised that DriveRights are sent on an agreed date, so that the period that vehicles do not have a DriveRight is reduced to a minimum. Please contact your (local) DriveRight reseller, or fill in the EasyCard Reservation Form and send it to the EasyCard Workshop for a fixed date.

Note that all trip data is removed from the DriveRight during the overhaul. So a download of trip data before the DriveRights are shipped is strongly recommended. Note that the DriveRight settings will remain in the DriveRight, unless you prefer to have them reset to factory settings again (as if it was a new DriveRight); fill in your choice on the Order Form. Just to be sure, compare the settings in the DriveRight with the settings in the software and change if necessary. Finally, because of the overhaul, marks and (name) stickers will be removed from the DriveRight. In case an optical mark is required for your own convenience, a label must be attached to the DriveRight connector cable (although this should not be necessary because you can always read the DriveRight ID).

DriveRights must be sent to the EasyCard Workshop:

- S We recommend shipment through DHL or another courier.
- S Transport charges and destination duties/taxes to be paid by the sender.

S DriveRight EasyCard Workshop
Akeleilaan 1a
NL-3333 GA Zwijndrecht
The Netherlands

Return shipments from the EasyCard Workshop will be done through DHL or another courier of your choice; transport charges and destination duties/taxes to be paid by the receiver. If you prefer to have the goods shipped on your account, the account number must be filled in on the Order Form.

Further information

In case further information is required, please contact the DriveRight EasyCard Workshop, e-mail easycard@driveright.cc, phone +31 78 6194527, fax +31 78 6196711, or visit www.driveright.cc for the latest information and user's guide.
